

FREE LAP TIMING FOR YOUR RIDERS. NO KIT.

TrackStats times laps from the rider's own phone and shows them where on your track they're getting faster. Your track gets its own page for official updates and a monthly leaderboard. It costs Bacup nothing.

WHAT RIDERS GET

- **Lap times on their phone.** GPS timing at a practice day, no transponder or pods needed.
- **Where they're faster and slower.** Each section of the track coloured green or red against their best lap, corner by corner.
- **A heads-up before they ride.** When a jump is rebuilt or a section is closed, they see it when they start their session.
- **Their bike's service log,** with hours counted from their rides. Free.

WHAT BACUP GETS

OFFICIAL TRACK UPDATES **TRACK OFFICIAL**

Post "Top jump rebuilt" or "Woods section closed" from your phone in under a minute. Every rider who has the track sees it before they ride, marked as coming from you.

MONTHLY LEADERBOARD

Fastest laps at Bacup this month, by class. A reason to come back next weekend, and ready-made posts for your socials. Only riders who choose a public profile appear.

FEWER SURPRISES ON TRACK

Riders reporting ruts, hazards or a fallen tree show up in one place, so you hear about them sooner.

NOTHING TO INSTALL OR RUN

No hardware, no laptop at the hut, no staff time on practice days. It runs on riders' phones in the browser.

WHAT WE'D ASK OF BACUP

ASK	TIME IT TAKES
Put up a QR sign at signing-on: "Time your laps free". We print and bring it.	5 minutes, once
Let us map the track: one steady lap on a practice day, or someone from the track rides it with a phone.	One lap
Post an update when the track changes: jumps, closed sections, hazards.	~1 min per change
A quick chat every couple of weeks: what's useful, what isn't.	10 minutes

HOW WE'LL JUDGE THE PILOT

Eight weeks. If it isn't working for Bacup by the end, we take the sign down and that's it.

40+

riders signed up from the sign

150+

practice sessions timed

Every

track change posted before the next practice day

Yes / no

Would Bacup keep it?

STRAIGHT ANSWERS

How accurate is it?

Phone GPS times laps to within roughly ± 0.3 – 0.7 seconds at bike speed. That's plenty to see progress in practice. It doesn't replace transponder timing for races.

Do riders need to carry a phone?

For now, yes: in a pocket or chest pack. A small logger that goes on the bike instead is in testing.

What about riders' data?

Laps are private by default. The leaderboard only shows riders who switch on a public profile. Track updates are public to everyone who rides there.

What does it cost?

Nothing for Bacup, during the pilot or after. Riders get timing free; there may later be an optional paid tier for deeper analysis.

Is it an app riders have to download?

No. It opens in the phone's browser from the QR code, on iPhone and Android, and can be saved to the home screen.

TrackStats · built in the UK for UK tracks and riders.
